Emergency Call Transcripts

C: ...

OP: He's 29. He's bleeding from the head; right?

C: ...

OP: Okay. So— I think so.

C: ...

OP: Okay. Just a moment. RO, are you there?

CRO: 8695, good morning.

OP: Good morning, 8695. 1366. This is all in regards to the World Trade Center, but we have an aided that is bleeding from the head.

C: ...

CRO: What's the address? Where are you at?

OP: He's at 109 Church Street in a shoe store.

CRO: That's fine. We'll send them right there.

C: ...

OP: Just a moment. We're going to send the ambulance right there.

C: ...

OP: Yes, ma'am.

CRO: Okay. Three persons are hurt there; right?

C: ...

C: ...

OP: Two persons hurt? RO, you should be receiving.

C: ...

OP: One, heavy bleeding from the head?

C: ...

OP: Okay. They're from the Two World Trade Center itself or they were passing by or how they got caught you don't know?

C: ...

CRO: Keeps blowing up?

C: ...

CRO: How many times it blew up?

C: ...

CRO: Oh, my God. Hold on one second, please.

C: ...

CRO: Okay.

C: ...

CRO: Understood. AC, are you routing me here?

OP: Yeah. You should be receiving.

CRO: The routing is going slow. I think that has something to do with the route. It's coming very slow.

OP: You're 8695?

CRO: Uh-huh. Okay. I'm going to take this in Manhattan. I'm going to take it home. We can't even get verification and stuff. The computers aren't even working right. Hold on one second. AC?

OP: Uh-huh. Let me -

CRO: Please, uh. What borough is that again that again, please.

OP: It's Manhattan, 109 Church Street between Park Place and Murray. Is that correct, sir?

C: ...

CALLER (to second person): CRO: Okay. I put it in manually.

C: ...

CRO: 109 Church Street?

C: ...

CRO: Okay. Give me a phone number.

CALLER (to second person): SECOND PERSON:

C: ...

CRO: Okay. AC, may I have your PD job number, please?

OP: PD job number is T3269. I'm going to document it on the other job.

CRO: 3269. Okay. And the phone number again is [identifying infonnation redacted].

OP: [identifying infonnation redacted]

CRO: Ambulance call number is 765, ACD.

OP: Sorry, your number?

CRO: My number is 865, but the ambulance call number I just put in is 765, because your route didn't come to me. So I put the PD job number in the text, and I put it in myself. It's going to come but a late file.

C: ...

CRO: No, sir. This is for our us to know that we don't put this job in again when it comes back. We put it in ourselves, and we have a link. We have — I'm going to explain it to you right now. We have a link from 91 1 to the Fire Department. The link is not working. So the link that comes through if the call comes in again, we won't be putting the same call in again, again and again, because today I'm going to get a lot of calls again and again and again.

C: ...

CRO: All right?

OP: (Inaudible.)

CRO: Tell the people to stay calm and not to move unless they're in danger of immediate injury. Lay flat and apply direct pressure to hemorrhage. Maintain airway —

C: ...

CRO: It's better if you stabilize his head and let him lay flat.

C: ...

CRO: Well, if the patient can breathe, we always try to lay flat and apply pressure. But you do the best you can.

C: ...

CRO: We appreciate if the person is laying flat it's better for the spine and keeping the head stable, but do the best you can. You're there; we're not there; okay?

C: ...

CRO: Apply the pressure, don't move the head, twist it or anything, and move the patient as less as possible, only if you're in immediate danger of further injury; okay?

C: ...

CRO: Have a good day, sir.

C: ...

CRO: Oh. Thank goodness.

OP: Are the police on the scene?

C: ...

CRO: How far are you from the World Trade Center, how many blocks, about? Three or four blocks?

C: ...

CRO: Okay. Thank you very much.

C: ...

OP: Okay. RO.

CRO: Thank you.

OP: Bye.

OP: 911. What's the address of your emergency?

C1: Sorry. I just -

OP: I know you're at Moll - I know you're at Sparetime. Do you know where he is?

C1: We don't know.

OP: Okay. Are you injured?

C1: We don't - we just don't know [inaudible] I saw him walk into the door.

OP: Okay. Where are you in the building?

C1: I'm on the , on the of the and there's a bunch .

OP: There's a bunch of ?

C1: Yes. That's what I've been told.

OP: Okay. We have people on scene, okay? They're going to be with you as soon as they can.

C1: We don't know [inaudible] where he is.

OP: It's okay. You don't need to know. Are you injured?

C1: No, but like I said, I don't know where is.

OP: Okay. How old is

C1: ...

OP: ...

C1: Yes.

OP: What's her name?

C1: Her name is ...

OP: ...? Okay. Where was she last known to be?

C1: [Inaudible] she was [inaudible] commotion [inaudible]. I don't know if somebody [inaudible] her and took her with them or if she's okay. I didn't see.

OP: I'm not sure.

C1: [Inaudible].

OP: We've had multiple calls and we do have a lot of adults calling us saying that they have with them, okay?

C1: Okay.

OP: I don't know, but we will get someone there. We have people there now and we will the officers there will help you find , okay?

C1: Yes.

OP: Okay?

C1: Yes.

OP: Just keep those around you as quiet as possible. If you hear the police announce themselves, make yourselves known, but otherwise I want you to stay down and stay quiet, okay?

C1: Yes. Yeah. [Inaudible]. We're okay [inaudible].

OP: I understand. Police are on scene and ambulances are on the way as well, okay?

C1: Okay. Yes.

OP: Okay.

C1: I don't know what's going on with that yelling.

OP: Yup. That's the - the officers are going to be yelling, okay? They are going to yell.

C1: I just don't know. [Inaudible].

OP: Just do not make any sudden movements. If you know there's police, put your hands in the air so they know you're not armed, okay?

C1: Okay.

OP: Okay.

C1: [Inaudible] never would've thought this would happen here in Lewiston, Maine.

OP: I know.

C1: [inaudible]. I've got to call .

OP: Okay. I'll let you go so you can call, okay?

C1: Okay. Thank you.

O4: 911, where's your emergency?

C: Well, it's not an actual emergency, however, I was just at the airport in Marshall and drove south on Old 27 and drove back north again and there's a very, very, very strong odor, either natural gas or maybe crude oil or something, and because the wind's coming out of the north, you can smell it all the way up to the tanks, right across from where the airport's at, and then you can't smell it any more, and I don't know what that is, but I felt that I should at least tell you.

O4: Okay. We'll get them to check it out.

C: Thank you.

O4: Thank you. Bye.

O8: 911 Dispatch, where is the emergency?

C: I live on Division Drive out past the airport, and there's a substation, but we can smell gas very strong. O8: Yeah, we have people out there, ma'am.

C: Oh, you do.

O8: Yes.

C: Okay. Thank you.

O8: You're welcome, ma'am.

O7: 911, where's your emergency?

C: (Indiscernible) Marshall Township. Where do we have an odor investigation? I didn't understand that.

O7: Your station.

C: Which one?

O7: The one on Fifteen Mile.

C: Okay.

O7: Marshall said he was in the area and said it was coming from around the station.

C: Okay. That's Marshall Thompson. I just didn't know which station you were talking about.

O7: Okay. What station is that? Hello?

C: Yes.

O7: What station was it?

C: Station 1 if it's on Fifteen Mile Road.

O7: Station 1. Okay. I'll let your dispatcher know.

C: I'd appreciate it.

O7: Thank you. Bye.

O5: 911, where's your emergency?

C: Yes, I called a few minutes ago about the gas fumes on Division Drive. They're getting much stronger. Is there any word? Is it safe? I mean our house is like affixiated with the gas smell.

O5: All right. Hold on just a minute. Ma'am, I'm going to put you on hold for just a minute, okay.

C: Okay. Thank you. (Caller placed on hold.)

O5: Ma'am?

C: Yes.

O5: We've gotten a couple of calls from that general area about gas. The fire department's en route now to investigate, okay.

C: Okay. Thank you.

O5: Yep. Bye-bye.

C: Bye.

O5: 911, where's your emergency?

C: I think it is anyway. I'm the cleaner at Walters-Dimmick --

O5: Okay.

C: -- and there is a huge strong odor of gas outside. I'm talking like gas gas.

O5: They've already been in the area. Let me see what they determined.

C: Oh, okay.

O5: Hold on one second, okay.

C: Sure. (Caller placed on hold.)

O5: Ma'am?

C: Yes.

O5: Both fire departments, Marshall City and Marshall Township have went out and checked, and they can't find where the odor was coming from, but it wasn't registering on their meters as being dangerous. So it has been checked.

C: Oh, good. I just didn't want nothing to blow up on me.

O5: Yes. I understand.

C: Okay.

O5: Thank you.

C: Thank you.

O5: Bye.

C: Bye.

Human Rights Declaration In Different Languages

Afrikaans: Alle menslike wesens word vry, met gelyke waardigheid en regte, gebore. Hulle het rede en gewete en behoort in die gees van broederskap teenoor mekaar op te tree.

Arabic: الناس الكل يتولدوا أحرار ومتساويين في الكرامة و الحقوق. توهبوا بعقل و ضمير و لازم يعاملوا بعضهم بروح الأخوة.

1, Human Rights Declaration In Different Languages

Bulgarian: Всички хора се раждат свободни и равни по достойнство и права. Те са надарени с разум и съвест и следва да се отнасят помежду си в дух на братство.

Catalan: Tots els éssers humans neixen lliures i iguals en dignitat i en drets. Són dotats de raó i de consciència, i han de comportar-se fraternalment els uns amb els altres.

Chinese (Cantonese): 人人生出嚟就係自由嘅，條尊嚴同權利上一律平等。但嘅具有理性同良心，而且應該用兄弟間嘅關係嚟互相對待。

Croatian: Sva ljudska bića rađaju se slobodna i jednaka u dostojanstvu i pravima. Ona su obdarena razumom i sviješću i trebaju jedna prema drugima postupati u duhu bratstva.

Czech: Všichni lidé se rodí svobodní a sobě rovni co do důstojnosti a práv. Jsou nadáni rozumem a svědomím a mají spolu jednat v duchu bratrství.

Danish: Alle mennesker er født frie og lige i værdighed og rettigheder. De er udstyret med fornuft og samvittighed, og de bør handle mod hverandre i en broderskabets ånd.

Dutch: Alle mensen worden vrij en gelijk in waardigheid en rechten geboren. Zij zijn begiftigd met verstand en geweten, en behoren zich jegens elkander in een geest van broederschap te gedragen.

English: All human beings are born free and equal in dignity and rights. They are endowed with reason and conscience and should act towards one another in a spirit of brotherhood.

Esperanto: Ĉiuj homoj estas denaske liberaj kaj egalaj laŭ digno kaj rajtoj. Ili posedas racion kaj konsciencon, kaj devus konduti unu al alia en spirito de frateco.

Europeze: Ala esien uman bornas frai i egal in dignite i directen. Endoted ov rezon i konsiensia, de musas akti un zu mit das altre in spirit ov fraternite.

French: Tous les êtres humains naissent libres et égaux en dignité et en droits. Ils sont doués de raison et de conscience et doivent agir les uns envers les autres dans un esprit de fraternité.

German: Alle Menschen sind frei und gleich an Würde und Rechten geboren. Sie sind mit Vernunft und Gewissen begabt und sollen einander im Geist der Brüderlichkeit begegnen.

Greek: Ὅλοι οἱ ἄνθρωποι γεννιούνται ἐλεύθεροι καὶ ἴσοι στὴν ἀξιοπρέπεια καὶ τὰ δικαιώματα. Εἶναι προκτισμένοι με λογικὴ καὶ συνείδηση, καὶ οφείλουν να συμπεριφέρονται μετὰ τοὺς με πνεῦμα ἀδελφουσύνης.

Hebrew: כָּל בְּנֵי הָאָדָם נִוְלְדוּ בְּנֵי חֹרִין וְשׁוּוִים בְּעֶרְכָם וּבְזִכְיוֹתֵיהֶם. כּוֹלָם חוֹנוּ בְּתוֹכָהֶן וּבְמַצְפּוֹן, לְפִיכֵךְ חוֹבָה עֲלֵיהֶם לִהְיוֹת אִישׁ אִשָּׁה בְּרֵעוּהוּ בְּרוּחַ שֶׁל אַחֲוָה.

Hindi: सभी मनुष्यों को गौरव और अधिकारों के मामले में जन्मजात स्वतन्त्रता और समानता प्राप्त है। उन्हें बुद्धि और परस्पर उन्हें भाईचारे के भाव से बर्ताव करना चाहिए।

Icelandic: Hver maður er borinn frjáls og jafn öðrum að virðingu og réttindum. Menn eru gæddir vitsmunum og samvisku, og ber þeim að breyta bróðurlega hverjum við annan.

Interlingua: Tote le esseres human nasce libere e equal in dignitate e in directos. Illes es dotate de ration e de conscientia e debe ager le unes verso le alteres in un spirito de fraternitate.

Italian: Tutti gli esseri umani nascono liberi ed eguali in dignità e diritti. Essi sono dotati di ragione e di coscienza e devono agire gli uni verso gli altri in spirito di fratellanza.

Japanese: すべての人間は、生まれながらにして自由であり、かつ、尊厳と権利とについて平等である。人間は、理性と良心を授けられてあり、互いに同胞の精神をもって行動しなければならない。

Korean: 모든 인간은 태어날 때부터 자유로우며 그 존엄과 권리에 있어 동등하다. 인간은 천부적으로 이성과 양심을 부여받았으며 서로 형제애의 정신으로 행동하여야 한다.

Latin: Omnes homines dignitate et iure liberi et pares nascuntur, rationis et conscientiae participes sunt, quibus inter se concordiae studio est agendum.

Lojban: ro remna cu se jinzi co zifre je simdu'i be le ry. nilselsi'a .e le i ry. selcru .i ry. se menli gi'e se sezmarde .i .ei jeseki'ubo ry. simzy'u'e ta'i le tunba

Norwegian: Alle mennesker er født frie og med samme menneskeverd og menneskerettigheter. De er utstyrt med fornuft og samvittighet og bør handle mot hverandre i brorskapets ånd.

Pijin (Solomons): Evri man en mere olketa born frii en ikwol lo digniti en raits blo olketa. Olketa evriwan olketa garem maeni fo tingting en olketa sapos fo treatim isada wittim spirit blo bradahood.

Polish: Wszyscy ludzie rodzą się wolni i równi w swojej godności i prawach. Są obdarzeni rozumem i sumieniem i powinni postępować wobec siebie w duchu braterstwa.

Portuguese: Todos os seres humanos nascem livres e iguais em dignidade e em direitos. Dotados de razão e de consciência, devem agir uns para com os outros em espírito de fraternidade.

Portuguese (Brasil): Todos os seres humanos nascem livres e iguais em dignidade e direitos. São dotados de razão e consciência e devem agir em relação uns aos outros com espírito de fraternidade.

Proto-Indo-European: h₂ólyoes ḡʰmónes h₁léwdʰeroes somHóeskʷe gʷʰrHtótēh₂ti h₂ǵtúsukʷe ḡnh₂yóntor. éybʰos dh₂tóry ménos kárkʷe h₁stés h₂énteroeykʷe smh₂éleyes bʰréh₂tr̥bʰos swé h₂éǵoyh₂nt.

Romanian: Toate ființele umane se nasc libere și egale în demnitate și în drepturi. Ele sunt înzestrate cu rațiune și conștiință și trebuie să se comporte unele față de altele în spiritul fraternității.

Russian: Все люди рождаются свободными и равными в своем достоинстве и правах. Они наделены разумом и совестью и должны поступать в отношении друг друга в духе братства.

Scots: Aw human sowels is born free and equal in dignity and richts. They are tochered wi mense and conscience and shuld guide theiselfs ane til ither in a speirit o britherheid.

Slovak: Všetci ľudia sa rodia slobodní a sebe rovní, čo sa týka ich dôstojnosti a práv. Sú obdarení rozumom a majú navzájom jednať v bratskom duchu.

Slovenian: Vsi ljudje se rodijo svobodni in imajo enako dostojanstvo in enake pravice. Obdarjeni so z razumom in vestjo in bi morali ravnati drug z drugim kakor bratje.

Spanish: Todos los seres humanos nacen libres e iguales en dignidad y derechos y, dotados como están de razón y conciencia, deben comportarse fraternalmente los unos con los otros.

Swedish: Alla människor är födda fria och lika i värdighet och rättigheter. De är utrustade med förnuft och samvete och bör handla gentemot varandra i en anda av broderskap.

Toki Pona: jan ale/ali li kama lon nasin ni: ona li ken pali e wile ona. ona li jo e suli jan sama e ken sama. ona li jo e sona pona e lawa insa pi pali pona. ni la, ona li wile pali tawa jan ante ale/ali kepeken nasin olin.

Ukrainian: Всі люди народжуються вільними і рівними у своїй гідності та правах. Вони наділені розумом і совістю і повинні діяти у відношенні один до одного в дусі братерства.

Yiddish: יעדער מענטש ווערט געבוירן פֿרֿי, און גלײַך אײַן כבוד און רעכט. יעדער ווערט באַשאַנקן מיט פֿאַרשטאַנד און געוויס; יעדער זאָל זיך פֿירן מיט אַ צווישן אײַן אַ געמיס פֿון ברודערשאַפֿט.

Karl Jobst / karljobst / FAQ_GOD / simthreat / approachhernow.com - Albino autist, Spergy speed runner, Pickup predator and Bitch of Mitchell
Thread starter Gremperor, Start date Apr 7, 2025
1743811096824.png 7153466-
721200879bd81edf0e5024003537c2f9.webp1743813554053.png1743811816724.png
1744163012234.png
Hello you absolute legends!
Karl Jobst is an albino Auzzie born 7 February 1986 Queensland Australia, formerly E famous for being a speed runner and drama whore "investigative journalist" now famous for scamming his gullible fans, owing The King of Kong a ton of money and speed running his reputation into a toilet.
Speed Running
4008355.png (Archive)
Jobst initially began online as a speed runner in the late 90's running games like Golden eye and Perfect Dark, later getting involved with forums such as the-elite (under the handle SimThreat (A) and GameFAQs (under the handle FAQ_GOD (A). He would admit in an interview that this began as a form of escapism as he "was...low on the social hierarchy" and "didn't want to leave my house, I was anxious to go outside" in real life.
40084884.png Link (Archive)
He would then go on to use his speed running skills and knowledge to become a youtuber combining two of the most worthless activities a human being can engage in into a fitting career for a man who would otherwise be Jobstless. The only thing of note to come from his speed running is one of the most embarrassing videos I have ever seen.
Here is Joshua Conner Moon owner of infamous website for gang stalking the mentally ill Kiwi Farms making fun of it.
Link to full 7 minute clip
Karl's reaction to this slight was twofold:
- Edit the video of his life's greatest achievement to remove his wife, likely ashamed of her appearance.
- Declare war on Josh's video, channel, patreon and send his fans to flag them down
1744067856975.png(Archive)1744067021773.png1744067153883.png1744067210417.png1744067258278.png1744067317138.png1744067417016.png1744067519859.png1744067603583.png
The outrage at people badmouthing his wife and his fiery defense of her might be one of the few positive qualities Karl has ever shown... or it would be if he were capable of extending that chivalry to others and not talking shit about the wives of men that he hates.
1744068566153.png
But who is Billy Mitchell?
The King of Kong

After transitioning his channel away from videos about speed running and towards more drama focused content slop, his main target for years to come would be American video game legend Billy "The King of Kong" Mitchell focusing mainly on allegations that Billy cheated to obtain his Donkey Kong arcade records and the many lawsuits centered around them. In 2021 Karl's wish to be sued by Mitchell would come true and he would begin scamming grifting? fundraising for his lawsuit with most people believing that Karl was being sued for calling Billy a cheater.
Right away drama would rear it's head when Karl's podcast cohost TomatoAnus cut contact and disavowed him, mainly over his past association with fellow Golden eye speed runner Ryan J. White / RWhiteGoose due to Goose making edgy /pol/ tier comments in his discord. Screenshot 20250408_184335.png
Karl would respond directly in his video "I'm Being SUED And CANCELLED!" simultaneously announcing the lawsuit and distancing himself from Goose. Karl would manage to avoid any major negative effects from this incident, possibly because of his fans support for him and hate of Mitchell.
(Archive)
While the lawsuit was still ongoing Karl would continue making videos on Mitchell, at its worst his channel would look like this.
4008556.png
After years of this obsessive behavior from Karl on April fools 2025 the outcome of the trial was announced: "Mr. Jobst intended to be the knight who slayed the Mitchell dragon. Unfortunately for him, his lance was not as strong as he believed it to be, and broke in the contest." and he now owes 350K dollarydoos to the King of Kong + interest + court fees = severe financial pain for Jobst.
Link (Archive)
In addition to losing a lot of money to Billy the bully, Karl also lost a lot of his fans when they found out the real reason he was being sued...
Foreshadowing
IMG_8660.jpeg Link (Archive)
"In Australia things are different, here almost always the loser is ordered to pay the court costs of the winner. I'm pretty confident I'm going to win so from my perspective it seems silly to settle because I believe I will be successful and I believe Billy will be ordered to pay back most of my costs"
"I will say Billy Mitchell being a video game cheater is extremely relevant to the lawsuit"
"Am I really going to be the only person Billy wins against? oh boy wouldn't that just be hilarious"
1743618517739.png
"Not because it is wrong, but because this isn't the issue I want to go to court over" (Archive)
Apollocide

You can read more about the Apollo Legend suicide [HERE](#) but the relevant details are that Billy Mitchell sued and settled with him under the condition that Apollo remove all videos about Billy Mitchell from his youtube channel and never talk about him publicly again, later on Apollo would get the spotlight in some inane speed runner drama defending RWhiteGoose which when coupled with his health issues caused him to kill himself. [image_2025-04-01_120620175.png](#) (Archive)

The lawsuit had nothing to do with Billy Mitchell cheating at a game almost half a century ago, it was because Karl claimed that Billy had caused the suicide of Apollo by suing him and taking his money, a statement that was easily proven false and made stranger by the fact that before he killed himself Apollo clearly blamed two friends of Karl's (DarkViper and EZScape) for "giving me the final push that I needed" in addition to the wider speed running community. [4008087.png](#) (Archive)

I love you all. Thank you to DarkViper and EZScape for giving me the final push that I needed. I tried to hold myself back in the video but I can't help it. People have no clue what I deal with everyday. When I was about five years old my dad threw me on the ground and covered my mouth and nose to where I couldn't breathe and screamed into my face because I wanted to play some game that he was playing and that's how he treated us everyday. I couldn't even tell that story without crying until I was 18 or so. I have scoliosis which causes my back, hips and shoulders to ache constantly. I'm sick everyday, I throw up often. My medicine makes me vomit but then if I don't take it I vomit. My body is completely useless, I can't do anything. I'm completely out of my mind, all my thoughts are so painful and aggravating and because I'm mentally ill everything I say online gets used to make me look like a bad person. I'm not a bad person, I'm under incredible stress. Try living with this much pain and let's see the decisions you make. That's only the stuff I'm comfortable talking about, there is more that's even worse. The speedrun community are such hypocrites. They pretend to care so much about everyone's feelings and then in the same video they call you retarded scum. I know I exposed people for cheating but I never said anything like that. They tell me they agree with me privately and then publicly betray me. If I complained about my life all the time then I bet they'd see me as relatable but because I try to push through it and act normal, they hate me. My greatest thanks to Tom, Jonas, Nick, Brad, Sonfloro, Tipster and Keem for being great friends even if I didn't always give you a reason.

Fun fact Karl Jobst contributed to the EZscape video on Apollo "The Downfall of Apollo Legend" (Archive)

I guess a guilty conscience or a desire to avoid scrutiny might explain Karl's extreme obsession with Billy. [1743652751144.png](#)

Even funnier is that Jobst's main defense for defaming Mitchell, was that his reputation was so poor from cheating at an arcade game claiming that he pushed someone to suicide couldn't have meaningfully harmed his reputation, unfortunately for Karl the judge wasn't an autistic man-child and didn't buy into this argument also the poor behavior of his deranged mutant fanbase constantly wishing death on Billy (for the crime of cheating at an arcade game) also damaged Karl's case. I'm sure Billy appreciates all the money these dipshits have indirectly donated to him, here's to you Josh & Andy lol. [4007956.png](#) (Archive)

Fallout

Reactions to this devastating loss in court were varied but almost completely negative towards Jobst.

After setting a new high score on Karl's bank account "Donkey Kong Champion/Legend/Hero" Billy "The King of Kong" Mitchell received VINDICATION leading to a bump in his hot sauce sales. [winner.png2025-04-03-160430_540x119_scrout.png](#)

The peanut gallery was completely bewildered and bamboozled.

7149795-5fe8caf46d5f7293520a9112fac780d4.webp7149797-b1aefd16397c8c2e665e60f5f18d4dfb.webp7149798-112dfef3d3ae4fe5af0994ea73fe84a6.webp7149772-8c7f114453c951308f8af7b20101314a0.webp

Former friends now disavowed weighed in. [1743580753841.png](#)

Former fans accused him of being a Nazi, racist, bigot to cope and turn on him. [4007245.png4007143.png](#)

Mockery. [7148205-e0385237735c2158d02abfc5ea77a515.webp](#)

and coping. [1743473819501.png](#)

https://kiwifarms.st/threads/Million Pity _ Baby Monkey Hate...

The most merciful thing in the world, I think, is the inability of the human mind to correlate all its contents. We live on a placid island of ignorance in the midst of black seas of infinity, and it was not meant that we should voyage far. The sciences, each straining in its own direction, have hitherto harmed us little; but some day the piecing together of dissociated knowledge will open up such terrifying vistas of reality, and of our frightful position therein, that we shall either go mad from the revelation or flee from the deadly light into the peace and safety of a new dark age -H. P. Lovecraft

Lol colt moss fucking killed himself after being arrested and bailed out for funding the production of monkey torture videos [1000054284.gif](#)

Zoosadists who killed themselves since being exposed and arrested for animal torture: 1 (SO FAR)

Arrest / Dox / Death

MONKEYFUCKERS BTFO

On the 13th of September '22, two animal abusers in indonesia - one of whom was the VO named "Fr" were fucking arrested for their crimes against monkeys. They'd been involved in the creation of at least 12 torture videos against macaques and langurs, including the drill video. They're just the first to go. You'll all get yours, cunts.

Hi glowies.

NOTE- DECEMBER 23, 2024.

Since this arrest featured above there have been countless other arrests both against the western consumers of monkey torture, and the southeast Asian producers. Special mention goes to the arrest of Black Pearl which was as a result of the actions of a poster from this very same thread.

Part One: What The Fuck?

Without question, the most evil thing I have ever personally encountered online, is Million Pity. Stumbling upon it one night, my skin crawled, and some deeply primal part within me recoiled in ghastly fear at what I was seeing. Behold, the very depths of human cruelty. I'll warn you now, this thread deals with extremely distressing topics of animal abuse; if you are easily upset, please turn away.

What I am talking about is the phenomenon that exists on YouTube and elsewhere, of videos that began being created and posted in the 2010s – by some accounts the summer of 2016, by other accounts, years earlier – depicting the torture and abuse of (primarily) baby monkeys. Million Pity is as close as there is to an official name for it, based on an oft-repeated phrase that people in this 'community' throw around. In this thread, I will attempt to explain what is behind it; and no, it isn't just angry third worlders, like a lot of people seem to think. It's a lot worse than that, and a lot more complicated.

[mp1.png](#)

3, https://kiwifarms.st/threads/Million Pity _ Baby Monkey Hate...

An example of a 'million pity' video: [link](#) (a). I apologise for the distressing imagery, I won't include unspoiled pictures like this further in the thread, but I feel like I needed to show one, for illustrative purposes. Trust me, this one is tame as far as they go.

Nowadays this content is thankfully a bit harder to find on YouTube than it was some years ago, in say 2017, but it's still there and in large numbers. Threads about hating baby monkeys also frequently pop up on the 4chan animal board, /an/, too. There is a good chance you too, my dear reader, have encountered this in your travels. The question on most everyone's minds, is what the fuck is going on here?

To answer this, let me rewind, and properly explain what this is, and why it is so horrifying. Then we shall get into the who and why of it all.

For me, I first noticed it one night in 2019, or 2018. I was watching animal videos on YouTube; top 10 Orangutan funny moments, Scariest bug REAL, lizard with face of man found in brazil... that kind of thing. You know how it is. As it turns out, this was a bad idea. Somewhere along the way I encountered a video with a curious title in broken English and a morbid thumbnail of a young rhesus macaque in clear distress. I did not click on it, but as I continued to watch other videos, such thumbnails popped up on the sidebar with increasing frequency. What the fuck? I asked myself, and eventually I suppose I must've clicked on one.

Beyond what I was seeing in the video – I think it was a small monkey trapped in something akin to a stockade – which was freakish enough on its own, what really got to me was the comments.

[mp2.jpg](#) [mp3.png](#)

Absolutely unHINGED, frothing, and gleeful hate for monkeys, being expressed in the most batshit of terms. Seeing hundreds and hundreds of comments like this really freaked me out in a way I had never experienced before. Clearly, there was something up here. I had stumbled upon a ghoulish crevice of the internet, wherein some grim and malformed culture of grinning freaks derived sadistic ecstasies from the brutalization of innocent creatures. The idea that there was just a community of hundreds or thousands of people lurking out there in the dark, who got their kicks from something like this creeped me the fuck out. Just what the hell is truly out there?

The thing that really got to me was the similarity of some of the comments; it wasn't just a disparate group of monkey haters, no, they all tended to use similar vocabulary – a jargon, if you will – and from the way they interacted with one another, and discussed other monkey videos they'd seen, it was clear that this was something far more socially developed than several unconnected people all commenting on the same video. This was a subculture of zoosadists rearing their head out in the open. I was reminded of seeing a crocodile submerged in a river; only its snout is visible, yet my nerves are set alight in fear, because I know something terribly dangerous lurks right under the surface.

And there are fucking thousands of accounts like this, and as many videos: [mp4.jpg](#) [mp5.png](#) [mp6.png](#)

An actually insane person wrote this.
So, what the fuck is this all about? Let's get to it.

Part Two: Paranormal Investigation

My interest in learning more about these strange, and terrible people was immediately piqued. But I found few answers amidst the rubble of internet hypothesizations. Answers do exist, however, and the place I found them happened to be the same place where you can learn how to summon a succubus, badly discuss Advaita philosophy, or ask God himself what his favourite anime is.
/x/ - Paranormal.

After a lot of searching, and lots of dead ends, I finally found the answers I'm looking for, and proof that the whole million pity shit was the work of a network of a group of dedicated zoosadists.

There have been threads on the farms about this, none ever scratched the surface; in fact, the very existence of a monkey torture community was seen as being unlikely. Unfortunately, such a community exists. I shall now attempt to detail the workings of the monkey hate community over the past few years, from 2019 through to today.

Our story begins here, with this thread (archive) on /x/, which details (as far as I can find) the first concrete evidence of the inner workings of the monkey hate community, via screenshots of a discord server named 'boysclub'.

This is not to say that this is the start of the monkey hate community; I've seen posts that imply it existed for many years before this, but I've not been able to find anything solid yet. As best as I can gather, the community may have sprung up around 2014/15 or thereabouts, centred around massive YouTube playlists; when the playlists and videos started getting nuked, the community moved to "MT Forums" (Million Tears, presumably) in 2016 through to 2018. I have heard conflicting info on whether this was the first consolidated gathering of the community or not.

Anyway, flash forward back to 2019, and boysclub. I've attached the screenshots provided by anon; all the censorship of images and names was done by the original poster, so unfortunately no names of the people involved came out of it, but at least these screenshots do not contain anything too graphic.

mp7.png mp8.png mp9.png mp11.png mp12.png

This discord was discovered in 2019 unfortunately, which means that it's almost certainly dead now. One thing that is known however, is the fact that the leader of this discord was someone named Poyo Zo, but I've not been able to find out much more than that. I'm not any good at doxing unfortunately, so if any investigative minded kiwis fancy digging into a zoosadist, that's a name to start with.

mp13.png mp14.png

The discords were only the start of it, however. From this point it gets a lot worse, and a lot more sophisticated. I'm not sure what the community was up to in 2020, but in 2021 they came to widespread prominence. As detailed in these articles (all archive links), there was a major exposé regarding the monkey torture community in that year.

Here's the skinny: In May of 2021 (probably a lot earlier, too) people used YouTube videos, like the ones described above, to recruit members into private telegram groups (essentially the same modus operandi as Poyo Zo and boysclub).

mp15.png

In these groups, not only were monkey gore videos shared between users, but the members decided to take it one step further and start producing their own videos of monkey mutilation. A scheme to 'adopt' monkeys was devised, wherein the group members would pitch in money to pay people in Indonesia (referred to as VO's, standing for Video Operator) to perform specific acts of torture on innocent monkeys that the group members requested. Some of the richest members of the groups had their own personal monkey, others would share a monkey, in the single most fucked up kind of carpooling I have ever heard of. The members of the group were predominantly from America, but some were from the UK. Below is a list describing the contents of some of the videos, provided by Lady Free Thinker:

mp16.png

After the publication of these articles, Telegram and other forum hosts that this group was hosted on shut down the groups, and... that's it? No one was arrested that I can find, no one faced any kind of justice, despite their crimes being brought to light. It came so close to this entire thing being brought mainstream attention, like the Furry Zoosadists from a few years ago, but instead, it was forgotten after Telegram shut down the group. But this doesn't mean that the problem went away. The distributors retained their contacts to the clients out west, and the monkey torture porn was still produced unabated.

This brings us to January of 2022, and to the website 0chan.life. From here on out, assume all links to potentially contain NSFL material. This obscure forum became the new hub for monkey hate, and one particular person rose to prominence: Mr. Ape (dox below)

mp17.png

In this thread (a (other archive) Mr. Ape essentially tries to become the million pity main character. He and the users of 0chan created a new telegram link for the collation and creation of monkey torture, and began recruiting new members from 4chan and elsewhere - as mentioned earlier, boards like /an/ and /gif/ became prime hotbeds of ape hate radicalization; the Darul Uloom Haqqania of animal abuse.

Under Mr. Ape, he and his recruits (they unironically called themselves his 'chimps') contacted one of the members of the telegram channels from the 2021, who would then contact various Indonesian zoosadists-for-hire, and produce snuff films featuring upwards of twelve monkeys who were killed for the pleasure of the 0chan creeps. A big part of why Mr. Ape's group was a step up from what came before, is that besides commissioning many, many videos of animal torture, they would freely distribute them on 0chan, to attract more and more monkeyfucking freaks.

A big thing I have noticed about million pity posters, is the fact that in addition to being zoosadists, they are the single most insufferable group I have ever encountered. They have all the delusional narcissism and undeserved victim complexes of furries, calling people who oppose them 'Karens', as if the idea that people shouldn't torture monkeys is something only the hysterical and self-righteous would think; they seem to believe they someone have a moral high-ground for being a bunch of cowardly, faggot, animal abusers.

As befitting a bunch of limp dick attention whores, whose only discernible personality traits are edginess and a supply of mommy and daddy's hard-earned cash, drama swiftly erupted, and Mr. Ape was doxed - not by any animal activist or anything like that, but by one of his own minions over some petty monkeyfucker drama. It evidently wasn't that hard a task, as Mr. Ape not only never stopped bragging about his area of study, but also gave out his phone number on telegram, as well as falling for numerous scams and cons. He apparently had serious delusions of grandeur, not only about his STEM degree, but also as being a perceived 'king' of the monkey community.

More info about Mr. Ape, and the fallout surrounding him, can be found here (a) [does not contain monkey gore, but contains gore pictures of dead soldier].

So, who is Mr. Ape? Drumroll please:

mp23.png mp22.png mp24.png

Name: Drexel Alejandro Venero

DoB: 4th January 1995 (27, as of my writing)

4, https://kiwifarms.st/threads/Million Pity _ Baby Monkey Hate...

From: Tampa, FL

Possible Address: 3008 W Chapin Ave, Tampa, FL 33611

Possible Address 2: 1900 Chapman Ave, Unit 643, Rockville MD 20852

Education: Undergrad, Physics (possibly Aerospace Eng.) at University of Maryland (graduated May 2022) - still doing an undergrad when you're almost 30? Fucking retard

Politics: Registered with Florida Democratic Party

The only reason I've put this section behind private tags is because the only proof I have of this person being Mr. Ape is from anonymous million pity posters:

I know beyond all doubt lol.

UPDATE DECEMBER 2024

ENJOY PRISON MONKEYCHILD

1616.pngso long and thanks for all the milk.png

mp18.png mp19.png mp20.png mp21.png

As best as I can tell, Drexel was doxed by one of his own 'friends', who either did it because they felt like they were not getting enough clout for their role in producing the videos, or perhaps they hated Ape, or whatever.

After Drexel's doxing - which seems to have occurred quite recently as of my writing, though I couldn't tell you an exact date - the community imploded in a frenzy of paranoia regarding who'd be doxed next by the "Karens", who to trust, and so on. The community on 0chan can be seen currently in a state of cannibalization, as users turn on each other, pointing fingers, hurling slurs; rats flee the sinking ship. In the midst of all this, monkey videos are still being spread on there, but to a much lesser degree than when Ape was active. Currently, it seems like the users of that forum are not in consensus of what the next step the community at large shall take is; users want a new telegram group to replace the Ape one. I am not sure if it has already been created, but either way, it is certain that this won't be the end of it. There will be splinter groups, there will be new websites, just because this thread has been written at a time of stagnation for the million pity community, does not mean that the scum has been washed away. There is still a demand for torture porn, and there are still distributors.

Mr. Ape was just a symptom of this the psychotic zoosadism disease. There will be another. More innocent animals will die. It overwhelms me with disgust and sadness to think about.

I shall now talk about the people behind the camera: the VO's, who film the torture.

Part Three: Insane Asians

When I began my research into million pity, one of the most common theories behind the phenomenon was that all the commentators on YouTube were a bunch of angry third worlders; this opinion is so ubiquitous that it was even parroted here, on this forum.

mp25.png mp26.png mp27.png

As elaborated above, the million-pity thing is a lot more complicated than that. The commentators on the YouTube videos, the members of the telegram groups, the anons on 0chan: none of them have been third worlders, they have overwhelmingly been Americans, or at least from the Anglosphere. It's similar to the production of CP in Southeast Asia, à la Peter Scully. It sells, but who makes it?

As best as I can tell, they mainly came from one of two countries, with both countries tending to produce a particular type of video.

Firstly, the country where almost all the YouTube content comes from: Cambodia. The Cambodian videos are - broadly speaking - of two types; pet monkeys being mistreated by their owners, and "animal rescue" videos.

YouTube Link

This video gives a highly educational breakdown on the motivations and socioeconomic factors behind the production of baby monkey videos in Cambodia.

Essentially:

>Cambodians are poor as fuck

>Cambodia had no vets whatsoever due to the Khmer Rouge

>The first batch of properly trained vets in Cambodia only graduated in 2021, and primate medicine is a far more advanced veterinary field that almost no one is likely to specialize in

>Cambodians may have, in good faith, made videos of monkeys being rescued and attempting to treat them with makeshift vet techniques. The monkeys are badly hurt on camera by people unaware of real animal care

>The highest paying regular profession in Cambodia (Doctor) makes around USD4,000. The

Ad revenue from a video of a monkey in clear pain generates around this much in one go

>dollarsigneyes.jpeg

>Sadistic and opportunistic people in Cambodia start deliberately hurting and mistreating monkeys on YouTube to make more money

A majority of the content on YouTube is a result of this. Some monkeys develop rabid cult-followings, akin to pornstars - it's a disgusting comparison, I'm sorry, but that's really how it is - and you'll often see YouTube users talking about specific videos or monkeys.

Secondly, and far worse, are the Indonesian producers of monkey torture content. The Cambodian videos may be considered 'softcore', but it is Indonesia where the bulk of the truly horrible stuff is created. While I was researching for this thread, I found an excellent (and very recent) writeup someone did on reddit (archive) (he claims to be currently infiltrating another monkey hate group unrelated to Mr. Ape's) that addresses a lot of the points I previously mentioned in my own thread, though with less detail. He did a stellar job on writing about some of the more notorious Indonesian producers of monkey snuff. To quote from him:

"Here's the information I have on the two biggest and most notorious monkey torture video producers. It's very easy to tell which producer is which based on the background setting and style of videos they produce. Both of them live in Indonesia, but that's all I know about their location.

They always torture one specific species of monkey called the crab eating macaque, also known as the long tail macaque. They are native to large parts of South East Asia and are very commonly found in Indonesia in particular. Long tail macaques are not an endangered species and are often considered pests by locals. Up until a couple years ago their conservation status was categorized as least concern, though nowadays they are considered threatened. As far as I'm aware there are no regulations on their sale in Indonesia. As such, baby long tail macaques can often be found in Indonesian pet markets for less than \$20 dollars each, making the production and sale of baby monkey snuff videos a highly profitable business model.

First I'll describe the most notorious of the two most popular torture video producers and also the most well known. This is the person who ran the Telegram server that made it into mainstream news articles last year. Before producing that type of content he was a typical

pet baby monkey Youtuber who over time gravitated toward hurting baby monkeys to attract a reliable audience of monkey sadists. He is most commonly known as Ji Owner within the monkey hate community since he was famous for owning a heavily traumatized baby monkey named Ji that he exploited for views on his old Youtube channel. Ji herself was famous for constantly holding the back of her head with her hands and rocking back and forth due to a traumatic upbringing. Somehow the monkey sadists found that hilarious and now Ji is something of a mascot to them. You can find out a lot about that by typing "Monkey Ji" into the Youtube search bar, there are a ton of videos documenting the abuse this man has wrought against baby monkeys while he was still just a Youtuber a few years ago. Once Youtube banned him he became a full time monkey snuff video producer. Note: new videos of Ji are still being uploaded to Youtube, but the channel that does this claims to be a new owner and not the original Ji Owner. I don't know whether or not that's true.

Ji Owner's monkey torture videos are easily distinguishable by an outdoor jungle setting. He can also be identified by his very long, gross fingernails and by the presence of his buddy who holds the camera for him. His videos are broken down into sequences of small clips, usually only a couple minutes each. This is not a result of editing them down, that's actually how he films them. While preparing different torture weapons he turns off the camera to avoid getting his face or other identifying information in the shot. He almost always kills the monkey at the end of each sequence of short clips, usually totaling around 12 minutes per monkey. Recently he's taken a liking to nailing monkeys to trees through their hands and feet rather than tying them up as he did in earlier videos. Monkey sadists consider his videos the gold standard of monkey snuff because of his unmatched brutality. They pay him anywhere between \$150 to \$300 per series depending on the torture instruction and weapons required.

The second most notorious producer is a man also from Indonesia. He used to run a pet monkey Youtube channel called Mas Pochet, and that's the name monkey sadists most commonly know him by. That channel was banned by Youtube in late 2021, but he keeps popping up under new names, moving from channel to channel as Youtube plays an extended game of whack-a-mole with him. He doesn't upload torture directly to Youtube, but he does mistreat them in his Youtube videos. That consistently leads to his channels getting banned. The purpose of those channels, as far as I can tell, is to advertise to monkey sadists who then contact him elsewhere to buy custom videos. I believe this is his current channel: <https://www.youtube.com/channel/UCYNWNSQzpAKCM-1Q6hshJOA/videos>

You can tell which channels are his by the distinct layout of his property and an assortment of recognizable cages that he keeps his monkeys in. Sometimes you can even recognize the monkeys that appear in his Youtube videos as monkeys tortured in his privately sold torture videos. You can tell apart his torture videos from those of Ji Owner by the higher quality of video and the fact that he usually works alone. That's not always the case though, occasionally he has someone else helping him. Also more of his videos tend to be indoors as compared to Ji Owner. He doesn't seem to own a tripod and has a tendency to hold the camera between his legs in a squatting position while he uses his hands to torture monkeys. Instead of nailing or tying them to trees like Ji Owner does, he has a tendency to tie them up spread eagle to the outside of their cages.

Mas Pochet is more prolific a torture video producer than Ji Owner, but his videos tend to be shorter, averaging five minutes each. This is because he is more willing to have a multitude of clients unlike Ji Owner who keeps maybe three at most at a time. Mas Pochet leases monkeys to his clients long term. Instead of killing them in each video, he is open to only injuring them and keeping them to produce more videos with later. This allows him to lease each monkey to multiple people who are then only allowed to request non-lethal torture so that the monkey may be reused. If a client wishes to kill a monkey they pay more to "adopt" one for the privilege of deciding the monkey's fate. Many of Mas Pochet's monkey sadist clients consider him unreliable due to his problem with alcoholism. As such, he typically charges less than Ji Owner does for videos." Click to expand...

This is all I've been able to find; info is quite scarce online, and unlike this redditor, I refuse to try and infiltrate any monkey groups. Researching this thread has made me upset enough as is. I don't mean to say that no Cambodians are involved in snuff content, or only these specific people are creating the videos; this is a huge fucking industry, and I'm only scraping the surface. There are other VO's like "ratmaster" (I assume he is a VO, but maybe he is someone like Mr. Ape who finances the production) who gets mentioned a lot, but I don't have the stomach to go looking, I am sorry.

The creation of these videos is done by horrifically sadistic people, but it is likely they would not have been made in the first place if there was no market for them. Since the creation of this thread, quite a few sites that were at one time used by monkeyfuckers as their playground, have since taken an active stance on moderation and removal of monkey-torture content, such as VidLi, which was a shortlived hub for them. However, there is still much work that needs to be done.

mp28.jpg
You tell 'em Yao

Part Four: Closing Remarks

This thread was horrible to write. When I started, all I was aware of was the 2019 boysclub server. I wasn't sure how deep the rabbit hole would go. In my research, I have seen things too horrible to put into words. I found out about Ochan in a thread on 4chan that had videos of cruelty that I can't even begin to comprehend.

The beauty of nature sometimes overwhelms me; I have personally seen baby monkeys in the wild playing with one another, playing pranks on their parents... the idea that there are people out there who relish in subjecting these beautiful animals to such terrible tortures, it makes me feel an emotion I can't put a name to. It's a profound sense of loss and fury, of guilt of knowing that this even happens. The next time I see a monkey, I don't know if I'll be able to stop myself from being overcome with grief. It is tragic. How can people be so worthless? These people all have names and addresses. It's all a matter of time.

Thank you for reading. Someone has to know.

Debugging Code Found in Human DNA

BIOPOLIS, SINGAPORE - the field of genetics is abuzz as a 3-man research team has discovered what appears to be "debugging code" in human DNA.

"We were investigating the part of the genetic code that's responsible for the growth of the posterior region," said one of the researchers, while looking away. "What we found was that there were some markers that caused a huge block of genetic code to be ignored. When we removed the markers, the DNA block was activated."

Researchers reported that the DNA then printed "Got here. len: 3" before exiting with a segmentation fault.

"I think we stumbled onto the routine responsible for the human tail. Based on the comments, it seems the designer wanted to refactor the code but never got around to it."

Researchers are referring to the numerous "TODO: FIX", "sorry about this", and "just for demo" comments littered throughout the region.

Researchers also found evidence of an "indentation disagreement" in the team, referring to inconsistent use of tabs and spaces in the unused code. There were also functions that were clearly copied from the anterior parts of the same area.

Asked to comment, one security expert said: "We've been saying this for years, but this is more evidence of poor security design in the human body. We urge the public to take proper precautions when downloading or uploading genetic code into any region of the body, front or back."

GNOME is Racist, Says Gnomes

Gnomes United (GnoUn), a political party catering to the needs of gnomes, released a statement yesterday at the "Meetup for GnoUn" decrying the GNOME foundation's use of racist imagery.

"We would like to remind the GNOME foundation that Gnomes do not, in fact, have huge feet", said Wolfin Yuminstall, party representative. "Those are Hobbits, not Gnomes."

Other party members, however, were not as tactful, as shouts were heard in the crowd.

"What, they think we all look alike?"

"At least the other desktop actually is kiddie-friendly!"

Instead of a foot, GnoUn recommended other possible symbols for the GNOME project, including: a pointy hat, boots of speed +1 an open toolbox.

Miguel de Icaza, one of the founding members of the GNOME project, denied any racist intentions at the meetup yesterday.

"It's not racist. We picked the icons out of a hat," said de Icaza to a booing crowd. "I have plenty of Gnome friends!" showing a picture album of colleagues, all of whom were sporting Unix beards.

Wolfin, however, criticized the reply, saying that "It is most unfortunate that he confused those for Gnomes. They are clearly dwarves."

Richard Stallman Interjects at Local Man's Funeral

A funeral for a local man of Lowell, Massachusetts, took an unexpected turn on Tuesday when the controversial founder of the Free Software Foundation and freedom advocate, Richard Stallman, seemingly appeared out of nowhere during an eulogy.

The catalyst seemed to be when the deceased man's sister was delivering her speech and briefly touched upon the man's "love and passion for Linux" during his life. Witnesses say Richard Stallman then appeared behind the woman and took over the microphone. "I'd just like to interject for a moment," he's reported to have said. "What this lady is referring to as 'Linux', is in fact, GNU slash Linux, or as I've recently taken to calling it, GNU plus Linux. Linux is not an operating system unto itself, but rather another free component of a fully functioning GNU system made useful by the GNU core libs, shell utilities and vital system components comprising a full OS (operating system) as defined by POSIX."

Nearby friends and family were quick to cut Mr. Stallman off and demanded him to identify himself and apologise, but the man had merely waved them off. "Furthermore," he continued. "You said your brother had been an avid user of the Steam DRM content delivery system. If that is true, then this man is truly more free now than ever! At least being dead he has all his freedoms, including the freedom to Rest In Peace, completely unburdened by non-free software."

Witnesses say that tensions then rose dramatically but Mr. Stallman had been unwavering. The GNU Project founder even made reference to many of the funeral attendees' "iThings" (referencing the fact they were carrying iPhones and other assorted smartphones) and put his hands into a handcuff gesture, further arguing his points about software freedom and stormed around the room, throwing his hands in the air over the amount of "proprietary software" being used, pointing to the sound system and the projector.

Reports say Mr. Stallman was last seen fleeing the funeral venue, accelerating away in a freedom respecting 1970s Toyota Cressida with the license plate "EMACS4Evr".

Local Man Seriously Reconsidering Relationship After Finding Girlfriend Using Nano

Even though his entire world was "falling down all around him", local man, Eli Tistprik, remained strong and seemingly full of resolve as he spoke to reporters on Sunday. Mr. Tistprik said that his 7 year relationship with his girlfriend, Andrea, was facing serious problems.

"Honestly, I've always felt Andrea was the 'one', you know?" said Mr. Tistprik. "But then one day, recently, everything about us just became a blurry mess of hellish crap. I walked in as Andrea was tapping away at some text document, and I kid you not, the bitch was using Nano. NANO! I instantly knew then that we were gonna have issues."

Eli Tistprik then proceeded to inform reporters, in between alternating flustered bursts of rage and deep heavy breathing as he visibly held back tears, about how "noob" GNU Nano is and how the entire event made him feel worse than even the time he found out Mr. Hooper from Sesame Street actually did, in fact, die.

"I was happy to stay quiet through some of our lower times, like the time I found Andrea trying to source a swastika shaped love toy," continued Mr. Tistprik. "Or the time I came home and found her in a bit of a flustered state with my best mate, Richy, for some reason. Oh, and I guess there was also that time she tried to cut my father's brakes."

"But to be using Nano, after years of being a Linux user alongside myself? Nah, I'm not copping that! She's gone too far this time."

Andrea herself, although unfortunately unavailable for an interview, did wish to comment, saying: “Eli uses Vim much like he approaches love making - clumsy, heavy handed and marred with many flustered expressions as he desperately tries to undo mistakes or get things to work right.”

“Nano might be modelless, but he’s just hopeless. He better be careful or I might execute the GNU Nano equivalent of CTRL+O on our relationship.”

We're Avoiding Earth Due to 'Pathetic' Software Standards, Say Aliens

Aliens are avoiding Earth due to humanity’s ongoing ability to allow themselves to be subjugated and locked into proprietary platforms. That’s according to aliens themselves, who say that humanity has truly revealed themselves to be a “lost cause”.

“Look, technologically you guys have been advanced enough that we were considering making official physical contact,” said an alien local of the Alpha Centauri system. “You know, stuff that not even NASA could cover up. But on top of all the wars, hate crimes and your unusual ability to strive to wipe out your own race, you losers also allow yourselves to be bent over by your proprietary software vendors. It’s pathetic! No point us going to the effort to meet with a slobbish species who happily allow themselves to be enslaved simply for comfort and convenience.”

The aliens went on to say that if humanity could allow themselves to be “enslaved so easily by their own kind”, then humankind would be fodder to the rest of the universe. “They’ll become someone’s bitches, that’s for sure,” said another alien. “If humanity is still around by the time the Milky Way collides with Andromeda, which I highly doubt, look out. There’s a few species in that galaxy who really know how to dominate a civilization. But we think planet Earth will implode long before then. We’ve seen the state of your online messaging boards!”

Although individual interview questions took several years to reach the alien interviewees and therefore it is not certain exactly which decade which the aliens were referring to, it’s believed they had at least knowledge of the Windows 98 and XP eras during most of the interview period. “That’s worrying,” said an ex-NASA official who wished to remain anonymous. “Things are arguably no better now. People no sooner free themselves from some of the Microsoft products, now you’ve got everyone giving up their freedom for the sake of convenience with the likes of Google and Facebook. You’ve got cars filled with the non-free stuff now as well that you can’t even drive yourself, much less work on. Dare I say, the aliens may wish to land an extinction level death blow if they witness things as they are now just to put us out of our misery.”

With the extraterrestrials’ transmissions reaching us at a notably faster rate than our own, we asked them about their messaging technology and the underlying code. “Er, sorry, that’s proprietary. Or at least we’re not ready to release the code yet or the hardware schematics,” came the response. “There’s a bit more cleaning up to do, then we might open it up to the galactic public. Maybe.”

<https://quake.fandom.com/wiki/Strogg>

The Strogg are a hostile cybernetic alien race featured as the main antagonists in Quake II and Quake 4, and as a playable faction in Quake III: Team Arena and Enemy Territory: Quake Wars. Members of the Strogg race also appear as playable characters in Quake III Arena, Quake Live, and Quake Champions. The Strogg are cybernetic constructs of unclear origin, which reproduce by taking biological components and fusing them with advanced technology in the brutal surgical process of Stroggification that enslaves their minds and enhances their bodies for war.

The Strogg’s need to harvest biological components for their own augmentation, and the flesh of slain enemies for the creation of stroyent, is their primary motivation, since it’s necessary for their survival. This motivation led the Strogg to Earth, which they promptly invaded, slaughtering millions of humans just to harvest their corpses. This Strogg aggression led to humanity’s long war with them that has continued unabated ever since. Among the SMC, Strogg are referred to as squibs.[1]

Background
Origins

Not much is known about the origins of the Strogg. They appear to be a humanoid race that originated on Stroggos, which has developed much like humanity. At one point, Strogg society became subordinated to powerful leaders, not unlike humanity’s various dictators throughout its history. Unlike humanity, the Strogg continued to iterate on the system for several centuries, eventually hitting a threshold where war, conquest, and destruction began to dominate their ideology, becoming their sole reason for existence.[2] Rotting remains of this ancient civilization would become the foundation for the grand palaces of Strogg imperial conquerors, long lost to history - but still eerily reminiscent of Earth’s darkest hour, dominated by Orwellian forces.[3]

Eventually, the Strogg expanded among the stars, with Stroggos becoming the heart of their civilization. Although suffering from industrial development and reduced to a barren wasteland,[4] Stroggos and its capital city of Cerberon would persist as the heart of the cybernetic war machine[5] for hundreds of years. The ancient Palace complex, consistently updated with the latest in Strogg technology, would remain the seat of the Strogg Makron, the highest ranking leader responsible for directing its imperialist policies.[2]

These policies would remain focused, if not fixated, on one policy: The aquisition of new organic material for fueling their war machine, twisted and ruined by centuries of war.[6] Stroggos was reduced to a wasteland, with factories and refineries spewing pollution and toxins into the environment for decades, if not centuries. What remained of Stroggos wildlife adapted, becoming fierce, carnivorous beasts preying on whatever organic material available.[7]

First contact

Main article: War against the Strogg

Crates bearing Strogg insignia were found in the events of Quake 1

Humanity’s first contact with the Strogg appeared during the Sligplate experiments under Dr Wendell Gilman. The scientist made contact with the strogg during his experiments, and used the technology gained from the cybernetic race to improve human Sligplate technology. The result was stronger, improved Sligplates that allowed human researchers to establish and maintain portals between their dimension and the “other side”. An unforeseen result of this decision was the revelation of human space to the Strogg, paving the way for the War against the Strogg that began with the Strogg invasion of human space (which may very well be a response to what they interpreted as “human provocation” or Ranger’s one man extermination of Shub-Niggurath).[8]

The brutal Strogg invasion occurred in 2065,[9] after sweeping through outlying colonial holdings on Mars and destroying human orbital facilities like the McCulloch[10] and Armstrong space stations,[11] which were long the subject of speculation. In fact, the Strogg may have created their nemesis during the invasion, as Corporal Matthew Kane served on Armstrong, and was hospitalized during the battle for Earth.[12] The Strogg made a fatal mistake: They attacked humanity. While other species yielded to their superior technology, such as the Psi-Radar,[13] Rail Howitzer,[14] Plasma Mortar,[15] or the Dark Matter cannon employing Bosonic orbs,[16] humans steadfastly opposed them, fighting tooth and nail for their survival. The newly formed Global Defense Force or GDF seized on any opportunity to counter the Strogg, including the capture of Strogg Sligplates to uncover the enemy’s secrets.[17] aggressive researching and reverse engineering of Strogg biotechnology,[18] and capture of vital Strogg assets like DataBrains used to construct Strogg facilities on Earth.[19]

A Strogg sligplate set up in Algeria, which led to an Earth-bound Nexus Tower.

The GDF exploited a small, but significant flaw in Strogg battleplans: The cybernetic race of conquerors decentralized its operations, constructing ad hoc stroggification facilities on conquered planets, with little regard for the strategic situation.[20] Although not significant on their own, coupled with the survival of human observatories that recorded the first appearance of Strogg sligplates used to invade human space,[21] and Strogg attempts to convert existing hydrocarbon extraction infrastructure for stroyent production,[22] allowed the GDF to gather enough intel and material to reverse-engineer Strogg technology and orchestrate a counter-strike.[23] In fact, the desperate fight against the Strogg invasion of Earth provided the first clues to the existence of a Strogg Nexus.[24] the sophistication of their technology when Contaminator devices were deployed to try and change humans into zombies en masse,[25] and the vulnerability of Strogg technologies to electromagnetic pulse weapons.[26]

Counter-attack by humans

Main article: Operation Alien Overlord

The Strogg likely did not expect fierce resistance by mankind - or the reverse-engineering of their technology. The Terran Coalition of Man focused efforts on finding a permanent solution to the invasion, as the GDF battled the Strogg across Earth. Soon, they discovered the origins of the sligplates, a sophisticated use of black holes to propel Strogg invasion forces across the vastness of space, and the Space Marine Corps was tasked with organizing a counter-invasion. Even as Earthen cities (or rather, their ruins) still smoldered, SMC Marines boarded C-30K troop carriers to lead an invasion of Stroggos, using sophisticated Mark 9A drop pods and reverse-engineered Strogg war tech.[27]

Stroggos, a desert wasteland, witnessing the second human invasion

Stroggos became the target, rather than the perpetrator of a military campaign for the first time in centuries, as the SMC focused on the core of Strogg civilization, the planet of Stroggos and its capital city of Cerberon.[5] After Bitterman, Joker, and Stepchild managed to achieve the SMC’s operational goals, despite the Corps suffering an unprecedented 95% casualty rate that left just 5% of the Marine force operational, the Strogg were put on a defensive footing, paving the way for a mass ground invasion by the SMC. Unable to repulse the attacks, the Strogg attempted to compensate by a brutal conversion of Marines into stroyent and various cybernetic monstrosities. However, even the deployment of Tactical Strogg, utilizing the best of the best of SMC troops to produce an answer to humanity’s own soldiers was not enough to hold the line: Humans adapted faster than the Strogg could. This was best exemplified by the deployment of Corporal Matthew Kane, himself a Tactical Strogg who nearly finished conversion, to penetrate Strogg defenses and attack the Nexus itself. [28]

Organization

The Strogg are bionic constructs with mechanical and organic parts fused together, with most controlled by a remote command and control system. Few are individuals in the usual sense.

The Strogg have settled on a centralized system of command and control, organized through a system of warlords. Each of these prominent Strogg would be responsible for a specific strategic location or aspect of the civilization’s operations, and all would answer to a Makron, elected from among the warlords to command the Strogg civilization from within the ancient Palace located at the northern end of Cerberon. This system granted a degree of efficiency, but also rendered the Strogg vulnerable: The assassination of the Makron would leave the Strogg confused and battling internally for succession, a fact that the SMC exploited to the fullest possible extent - despite the uncharacteristically swift election of a successor after Bitterman’s successful attack.[29]

Culture

Aged Strogg banners and fortifications. Many such banners still hang on or inside Strogg installations, though many of them, like the buildings, are weathered, torn, stained, and almost ancient in appearance. It’s possible the Strogg still make these flags and display them as a holdover from a past age when they were less enslaved by their technology, since otherwise they would see this as a waste of resources due to their lack of need for morale or military pride compared to humans.

Strogg society is marked by brutality and savagery without parallel. The biggest and strongest Strogg are automatically the ones with higher authority. The most superior Strogg gain the title of Makron and have absolute power over the Strogg civilization or society. Larger and more powerful Strogg have little respect for their weaker brethren, with many a light tank killing or trampling lesser Strogg foot-soldiers if they get in the way. Unique powerful Strogg function as guardians and act as subordinates to the Makron, such as the Tower Guardian which was tasked with the outer defense of the three security stations surrounding the central Strogg Nexus tower.

The precise reasons for invading Earth beyond resource harvesting were never identified. Beyond retaliation or respondind to Gilman’s sligplate experiments, SMC Marines speculated that the cause was simply because of Earth’s strategic location, giving the Strogg the ability to attack dozens of other civilizations,[30] following a long-forgotten directive from an ancient war in another part of the Milky Way galaxy, due to them being created as super-soldiers for overcoming enemies.[31] or simply following the logic of evolution: The Strogg marriage of flesh and tech was the next step in the advancement of species.[32]

Strogg culture - or what remains of it after centuries of constant war, expansion, and elimination of independent thought - is dominated by a fixation on warfare, with all their efforts being geared towards this single purpose. The majority of buildings on Stroggos are nothing more than countless armored bunkers, weapons factories, defenses, and massive fortifications. The Palace of Cerberon is a rare example for prestigious Strogg architecture. Many of the buildings show signs of extreme age and crude construction, rusting to the core, though they all tend to have the same kinds of elevators and automatic doors that are typical of human military installations.

Skull and wings, the most common Strogg emblem, A common military symbol of the Strogg, Another symbol resembling a rising eagle, Eagle banner, Another eagle banner variant, Winged skull banner

#Language

A sample of Strogg-style script used for the “English” signs on Stroggos in Quake II: “WАЯЭНΟΥЭ”.

The Strogg alphabet as it appears in Quake 4, with translation below the characters.

The Strogg language functions very similarly to English, with various symbols forming separate words and basically working as letters, as opposed to symbols representing whole meanings in the way that Chinese, for example, works. However, there is little indication that many humans have managed to understand it even after years of war against the Strogg and study of them. Understanding of the Strogg language is gained from a neurocyte being implanted in the cerebral cortex, and few human translators would volunteer for such a procedure.

Language remained a key barrier in fighting the Strogg. By the time the SMC invaded Stroggos, only eight humans were fluent in Strogg, and barely four understood Strogg programming.[33]

Technology

Torso unit at the Dispersal Facility

The Strogg mastered many aspects of science, thanks to their utter absence of ethics and emphasis on practical results. The Strogg have no concept of ethics in their medical research and will do anything to anything living that they get their hands on if they think it can help them streamline the stroggification process (where alien species such as humans are subjected to a brutal surgical procedure where entire parts of their body are replaced by biomechanical implants), advance their own medical capabilities, or enhance their weapons to kill more efficiently.

The biomedical sciences, are a priority as a result. Those who aren't sent to be processed into Strogg are used for mortality tests. Various organs are removed by Strogg scientists without the use of any kind of anesthetic, to study the agony of their captives and the bodily response to various surgical interventions. They also want to ascertain how long a human can last without certain organs. To the captives, this procedure is torturous, long and horrific, driving the victims to insanity and inevitably death.

Humans captured during the Strogg invasion who weren't processed on location were removed to Stroggos, where they underwent "conversion": A traumatic procedure where entire parts of the body were removed using crude surgical implements and replaced with mechanical appendages. Subjects were kept alive by a combination of steroids and healing medicines.[34] Additionally, nanites were introduced into the body and continuously repaired tissue, even in body parts that were entirely separated from the host.[35] By the end of the process, less than half of the original body was left, with human doctors describing the whole process as sophisticated mutilation.[36]

Strogg decomposition phase. The decomposition in Quake 4 is due to this game using the Doom 3 engine, id Tech 4, where demonic enemies burn away after being killed. This feature was not present in Quake II, which used id Tech 2.

At the same time, Strogg technology was incredibly sophisticated, bonding with existing nervous systems on a level deep enough that even the most advanced medical systems at the SMC's disposal would be hard pressed to disentangle them.[37] This level of bonding was necessary, as all command and control was centralized in the Nexus, with most Strogg completely enslaved by the neurocyte implanted in them as the final stage of the stroggification process. A transceiver located at the base of the skull provided the connection to the Nexus, dictating a Strogg's every move, overriding their higher thought processes. This reliance on external processing led to a general atrophy of independent thought among victims of stroggification, although most of them retained awareness of their actions for a short time after the procedure, until the higher brain functions atrophied.[38]

The mere presence of the neurocyte in a host grants them a command of Strogg language, the ability to intuitively access Strogg control panels and pass through security grids unhindered. Though small, each contains an artificial intelligence programmed into it that's responsible for these gains, interfacing with Strogg hardware implanted during the stroggification process and pre-existing nerve systems, such as the cerebral cortex (as onboard memory, equivalent to RAM), accessed by temporal implants wired directly into it. Benefits extend to photographic memory and external memory lodged into the skull, as well as dozens of failsafes that make it very difficult for even the most capable SMC technicians and doctors to attempt removal of implants.[39]

Perhaps the most notable, though understated example of Strogg advancement was the method of neurocyte implantation: It was installed using a large hypodermic needle, driven directly into the brain of a fully conscious subject at the last stage of stroggification. In human terms, the damage to the cerebral cortex during implantation would likely kill a subject due to the trauma involved, but Strogg tech managed to achieve the impossible.[40]

Nexus

The Nexus was a vast communication system responsible for processing and coordinating these actions, capable of processing and organizing billions of Strogg in real time, delivering instant instructions to drones in the field, straight from the small number of Strogg leaders. [41]

It's unknown how Strogg are subject to emotions after linking the neurocyte to the Nexus. The Makrons possessed an arrogant character, laughing grotesquely at their enemies in combat and taunting them, while various Strogg shout about detecting traitors or enemies upon sighting SMC troops.

Stroyent

Stroyent health station

Main article: Stroyent

The biomechanical nature of the Strogg was bolstered by their use of the stroyent, a synthetic substance that provided both health and ammunition to cyborgs in the field.[42] It is distributed either as packs or fixed "health stations", where a biological storage unit is used to hold the stroyent, until it's needed by a Strogg cyborg for replenishing health and ammunition.[43]

Stroyent is generated by processing any organic material (including crude oil, as the GDF discovered during the invasion Earth) by the Stroyent Processing Creature or any on-site processing materials. The Strogg specifically gather the dead remains of their enemies

through a process known as harvesting. Both specialized Harvester walkers and individual Strogg gather corpses for processing, and capture live humans for stroggifications or conversion into stroyent. Humans are specifically seen as either food or potential conversions, in fact.[44]

A related development are the torso storage units: The Strogg were able to take power from human torsos and used many biological systems wired directly into their facilities, such as the giant heart which pumped stroyent across their world. They were able to power whole facilities using torsos, many of which were headless and regulated by a neural link that kept their body functions going. Others still had heads but showed signs of extreme intoxication. Alloys and other tech[]

The Strogg rely on the use of hardened tribinium for much of their technologies. Comparable to Marine body armor alloys, the Strogg metal is exceptionally difficult to work with.[45] Other notable achievements include the Icarus GravPac, granting even the least of the Strogg conversion the ability to make long-distance jumps,[46] and dedicated cyborgs to fly indefinitely.[47]

Furthermore, Stroggos overwhelmingly relied on a local bluish crystal called steedium to generate power and maintain the many systems on Stroggos, up to and including its planetary defenses (the Big Gun).[48]

Other military technologies[]

In summary, the Strogg possessed superior technology to humans, at least at the outset of the war. Their most advanced technology is the use of black holes to travel massive distances (harnessed as sligpates), which also led to the development of teleporters. The teleporters are specially made only to transport Strogg and kill humans that use them, unless they have been stroggified, exhibiting Strogg physiology.

The Strogg have developed a variety of highly advanced weapons, ranging from small energy-based blasters to fully-functional railguns and even the Dark Matter Gun, a devastating weapon firing a deadly orb that consumes smaller enemies and inflicts severe damage on bigger ones. In the following, there's a short overview of common Strogg weapons.

Blaster, Machine Gun, Shotgun, Nailgun, Grenades Lightning Weaponry, Rockets, Railgun, Dark Matter Gun, Incendiary

Strogg units

The Strogg use a variety of different cybernetic constructs as soldiers. Here are some of the different kinds of combat units:

Aggressor, Constructor, Infiltrator, Oppressor, Technician, Arachnid, Berserker, Brains, ...

Non-military Strogg

There are Strogg that are not used for military purposes. These Strogg primarily specialize in medicine, engineering, or science: Brains, Medic, Technician, Scientist, Repair Bot.

Behind the scenes

The actual background for the Strogg was never detailed, until Quake Champions developer SyncError noted in the official Discord server's #lore Channel that Ranger era was likely the first contact between humanity and the Strogg. More precisely, according to Strogg and Peeker lore scroll 5, most of enemy units in Quake II are strogified Greiss, the same one the Scalebearer hails from. The Strogg May have even had contact with humans before the events of Quake and Quake II. It is believed that the Strogg are a creation of The Great Old Ones, as a method to exterminate mankind after the death of Shub-Niggurath, with creatures such as Armagon and the Centroid being possible prototypes of the Strogg race.

Language

The presence of English signage on Stroggos, as depicted in Quake II and Quake 4, would suggest that the Strogg do use written English. Another possibility is that some humans, including the invading Marines, have learned the Strogg language, at least in its written form, and it is being "translated" into English for the player -- a supposition which may be supported by the alien-looking font used for the English on Stroggos, intended to imitate the shape of the "real" Strogg script. Note that some Strogg, having been processed from captured humans, do speak English -- for example, the Berserker growls "Trespasser!" or the Iron Maiden snarls "Traitor!" or the Gladiator utters "A traitor!" upon spotting the player, and the Strogg in Quake 4 also taunt the human soldiers in English. Some of the other Strogg troops yell out non-English words (such as "Hito!", Japanese for "A man!", by some Guards). Perhaps in compensation for the readable signs in Quake II, Quake 4 goes further by still using English in Strogg signs but disguising the letters into forms that are barely readable and need practice to interpret (see the chart to the right).

Real-world equivalents

The Strogg Flag is similar to the Third Reich Flag. Also, the fight with the first Makron (in Quake 2) is similar to the battle with Adolf Hitler in Wolfenstein 3D. The design docs for Quake 2 explicitly note the parallels between the Strogg and Hitler's insane plant for world domination.

Similarly, the heavily-disguised, hard-to-read English used for the many Strogg signs in Quake 4 may be compared to the use of German in the more recent Wolfenstein games. In both cases, English-speakers can get a vague hint about what the signs say, but full understanding would require an extra effort.

Another real-world equivalent to the Strogg script in Quake 4 for English-speakers would be for a post 90s born Croat to try to read Serbian Cyrillic. Along those lines, "strog" happens to be a Croatian, Serbian, Slovenian, and Bulgarian word meaning "strict" or "harsh".

In Ancient Greek orthography, to represent the velar nasal, "ng" sound, the digraph "gg" was used. Therefore, when applying this logic in reverse to "Strogg" you reach the English word "Strong". Though this may be a mere coincidence, it should be noted that the term "Makron" does come from Greek.

The Strogg also have many similarities to the Borg Collective from the Star Trek universe in the same manner they procreate; the only difference is that the Strogg lack any signs of hard interdependency.

Reddit: IAmA Private Investigator, Ask Me Anything. (Part 2)

IAmA Private Investigator, Ask Me Anything. (Part 2)

private-investigator

I have done one of these before and these pop up a couple times a year, but there seems to be sufficient interest for a another one.

I am a Private Investigator, working in the North East. I work for a national firm, dealing mostly in Worker's Compensation and other Insurance claims.

I'll try to answer all questions the best I can, at least through the end of the day.

Edit: Verified

GreatCanuk69: How do you investigate things? Do you use gadgets?

OP: A typical Investigation starts with a background check. We receive an automated database check for each case which provides us with all recent addresses, phone numbers, relatives, criminal history, vehicles, professional licenses, etc. After reviewing this, I delve deeper, looking for social networking profiles and other webpages that mention you. Even if you don't have a facebook, there is a good chance that one of your relatives or roommates

7, Reddit: IAmA Private Investigator, Ask Me Anything. (Part 2)

do, and a good chance that they have pictures of you or information about you online. The very best situation is one where I find an e-mail address. A google search of someones e-mail pulls up an incredible amount of information, basically every site you ever used it to register to.

After all that, a typical case requires 2-3 days of surveillance. I park inconspicuously in the neighborhood, either within view of the residence (best case) or watching the most likely route that the person would take to leave. From there, I'd follow the person every where they go, usually in 8 hour shifts, and document their every activity.

For equipment, I have a 70x zoom digital video camera, an awesome little twisty tripod that can attach to just about anything, and a covert camera that looks like a button to use if I follow people inside a building.

freevo36: A google search of someones e-mail pulls up an incredible amount of information, basically every site you ever used it to register to.

Just googled my own email address: three results, all from the same site, all irrelevant. Ha! Does something like this happen very often? How careful are people with their email addresses and personal info usually in the U.S.?

OP: It depends the age of the person. People who are 18-24 or so you can almost guarantee they have social networking, and are usually not careful about hiding it (unless a lawyer tells them to). 24-40 or so are very careful and sensitive about their privacy online. Over 40, if they use social networking at all, usually do not know enough about it to use privacy settings properly. They also tend to post less.

metalbum14: How do you manage to get around the privacy settings that might be set up on social networks? Or is it not worth it to bother?

OP: There is no legal way around the privacy settings. I know of some Investigators with private companies who will use phishing, or create false profiles to friend people on facebook, but those practices are illegal, and an easy way to lose your license if you caught. That being said, about 50% of the time, if the person has a completely hidden facebook, I can still get pictures of them and information about them through other people's profiles who are not as careful with their information. I usually get a list of relatives and neighbors for every case. If the person is a parent to a highschooler, I can almost guarantee that I'll find a "Family" album on their child's profile, or something similar.

CrisisOfConsonant10: As a person who has no social media and actively avoids pictures, has no friends, and doesn't really do anything I'm your worst nightmare. I also use different user names on pretty much all the websites I register on.

Well I would be except I don't do anything interesting enough to warrant being investigated. Why do you think 24-40 is so careful about privacy? I've been on the internet for a long time, I realize the permanence of it, but I feel there are plenty of 30 year olds who don't (they're not generally as active on social media as 18-24 but that's because they weren't raised on it).

OP: I only find social profiles about 50% of the time. A surprisingly large number of people don't maintain an online presence at all.

dog_in_the_vent17: I park inconspicuously in the neighborhood

How often to people come up to find out what you're doing?

OP: I stay far enough away from my claimant's residence where they won't have any idea that I am there, my camera's zoom is strong enough to read a newspaper from 150 feet away. That being said, I usually am sitting directly outside of someone's house for 8 hours at a time. I don't always get asked questions, but I probably get approached a few times a week. I'm good at lying though, and people tend to trust me.

dog_in_the_vent18: That being said, I usually am sitting directly outside of someone's house for 8 hours at a time.

That's more what I was worried about. I'd certainly be curious about a stranger who was parked on the curb outside my house.

What do you tell people when they ask what you're doing?

OP: Usually I tell them that I'm doing a vehicle repossession. If they inquire further I just tell them that I could lose my license for disclosing any further information, and they typically accept it. The trick is sound extremely professional when they first approach you, and then to bitch about your job/boss giving you pointless dead end files. If you complain about your pretend job, people automatically believe you.

billylooser16: If I would run into someone observing a residence from his car how do I know it's a private investigator and not a burglar?

OP: Call the police. If they are a private investigator, the police will know that they are there, and will assure you that they can remain there. If they are not a private investigator, the police will want to know that they are there. Win win really.

chrislck18: Nice - does it mean you are required to tell the police where you are when you are observing?

View HistoryShare Link

OP: It's not required, but we do it as a mutual courtesy. They don't have to waste their time coming out to check on us, and in turn they don't blow our cover.

ComradeCube11: Usually I tell them that I'm doing a vehicle repossession.

People never call the cops on you to be sure?

OP: They do. Actually, I usually encourage them to do so. I check in with the local PD every morning, so they know I'm out here. When I neighbor calls the police don't give away any information, the just say that they know I'm here, and that there's nothing to be worried about.

ComradeCube5: Anyone scare you off by outing you to the nearby houses?

OP: No. One thing I've learned while doing this is that I am the scary one. The really bold people will approach my vehicle with a cautious attitude. I've never had anyone become violent with me, and have only had someone get aggressive once.

Par1ah6: What camera and lens are you using?

OP: It's a Sony Handy Cam, 70x lens zoom, and a 2000x digital zoom. Fantastic little camera.

msnthrpy2: [deleted]

OP: It happens pretty often, there are way more cul de sacs than I realized before I started this job. I wouldn't sit in view of your residence. I'd sit on the main road that your road comes out on, and just watch for every single car that leaves. It's more work, but it usually works out. If even that isn't possible, I'll probably ask a neighbor who is far down the road to park in their driveway. Most people oblige. If I am parked legally on a road, I will only move if I think the claimant is getting suspicious. There's nothing neighbors or police can do to force me to leave, as I am exempt from loitering laws as a PI

benwaaaaaaah8: So I just Googled my email address and nothing came up related to me. Also, my FB first and last name are completely different than my real life name. What would you do in that case?

OP: Not everyone keeps a strong online presence. Some people that I investigate don't even own a device that can go online. I would just discount the social networking check, and continue normally. I'd still know all the basic info from our back ground checking program: vehicles, addresses, relatives, etc. You might be careful with your facebook, but are other people careful with it? Does anyone list you as a relative or as in a relationship? Do they have photos of you on their facebook pages? If I can't find a profile, I'll typically look through their relatives, find someone whos between 15 and 20 years old, and look up their facebook page. They will undoubtedly have one, and will probably not care for their own or anyone else's privacy.

trmatthe2: Thank you for the reply.

And to determine your willingness for AMA, how best can we make things tricky for you? :)

OP: Get a lawyer. Unrepresented claimant's are way easier to investigate. When they aren't represented I can actually approach the residence, talk to them under cover, call their house to confirm them home, things like that. They also tend to be less on the look out, and less attentive to online privacy.

Cyborg_Penis-Pump6940: When my sister was in high school she was dating an older guy (25). My parents were like "wtf, this guys a loser" but they didn't trust him so they hired a p.i. The guy came back and told my parents that the guy was probably the most boring person he has ever followed.

Does this ever happen to you or are you always on important investigations?

8, Reddit: IAmA Private Investigator, Ask Me Anything. (Part 2)

OP: I'd say that probably just about half my cases are complete duds. The problem is that the sort of person who commits insurance fraud is usually the sort of person who just sits around at home all day and doesn't do anything. Either that, or the insurance claim is completely legitimate and the person is probably lying in bed with a bad back all day.

NotYetRegistered37: Most memorable case?

View HistoryShare Link

OP: I followed a guy who turned out to be in a death metal band. Started early, and right before I was getting off my shift, followed him to a bar, where him and his band were playing. ended up being a 17 hour work day, didn't get home till 3 AM, and had to sit through a bunch of death metal bands. Not really my thing.

HeyFunkyPianist18: Who pays you for this, and why would they?

What is the most common reason for you to investigate someone?

OP: The insurance companies usually are the ones hiring us. They pay for it because they have anywhere from a couple tens of thousands to over a million dollars at stake.

manskies35: My cousin had a private investigator on him because his wife suspected him of cheating on her. I highly doubt he would do something like that. The P.I. told his wife he was seeing his secretary. Could it be possible the P.I. was lying to his wife so he could get paid?

OP: It's unlikely. The PI would get paid either way, so he probably doesn't really care about the outcome that much. Things are never as simple as they seem though. I don't deal with infidelity at all, but there are laws prohibiting videoing people where they expect privacy and what not. The PI couldn't know exactly what he was doing with the secretary, unless they were doing it openly in public, only that he visited the secretary outside of work, etc. The PI probably provided your cousins wife with sufficient hard evidence as well, pictures, video, audio, etc.

artosis42031: What are some tell tale signs that I am being investigated? Apart from someone losing their limp, what type of evidence can you use to prove insurance fraud?

OP: The best way to know if you are being investigated is to just keep an eye out for cars that you see often. We tend to be pretty good at not being noticed, but if someone is really watching for it they will notice that they keep seeing the same little black honda over and over where ever they go. It will never be obvious, I usually stay a couple cars back when following people, and I try to stay as far from the residence as I can while still being in view of it.

Most cases aren't as cut and dry as someone completely faking an injury. A lot of times it will be a legitimate injury that they are exaggerating, or an legit comp claim that they had, but have since healed and don't want to lose their compensation. Most claims come with restrictions, ie: don't lift more than 10 pounds, no bending at the waist, etc. Most of the evidence is centered around the restrictions.

SomeFokkerTookMyName32: If GTA taught me anything, it's that staying two car-lengths back will make you invisible.

OP: It's basically true. I hate the stake out missions on GTA, totally inaccurate, and I feel like I'm just repeating myself.

keyleighswift15: How do you/would you handle motorbikes? I imagine it would be hard for anyone in a car to follow me to work, with the amount of overtaking and lane splitting I do.

OP: I hate motorcycles. On top of them lane splitting, they tend to accelerate far faster than I can, and are extra attentive about the vehicles around them. I have followed them successfully in the past, but it's a pain.

familyorfriends10: You make a workers comp or personal injury claim and the defense is contesting the extent of your injuries.

OP: Pretty much. It's rare to find someone who is completely faking it. When they do, they usually use phycological claims, which are difficult to prove false.

familyorfriends16: I have a question. I live with a person with an "invisible" disability.

Sometimes they are able to do things they normally say they can't, like walk without a cane for a period of time, carry a bag, etc. But what normally happens is that they will pay for it later with pain levels.

How often do you use things like that for the benefit of your clients? Do you use little brief moments like that to provide evidence someone is not disabled or as hurt as they claim?

OP: The "good day, bad day" claim is pretty common. Just because someone bends over to pick up a quarter off their driveway doesn't mean that they don't have a bad back. To combat this, we typically work consecutive days of surveillance and try to show that the person repeatedly breaks their restrictions without any sign of pain or discomfort at the time or later. Sometimes it's obvious though, a claimant will tell their doctor that they can't even move their right arm without extreme pain, and then we get video of them lobbing furniture and trash bags into a dumpster with said arm.

Some clients will try to use individual instances of breaking restrictions to reduce the amount of money being paid out, but if the claimant is represented, they aren't usually successful.

familyorfriends5: By the time they call you in, are your clients fairly convinced that someone is outright lying about or exaggerating their injuries?

Are your clients defense attorneys, insurance companies, or the third party workers comp administrators?

Edit: what stage are you brought in? Do they use your info to deny/approve someone's claim? Or do they use it to support the denial after the fact?

OP: Hiring a 3rd party investigation firm is fairly expensive, so they usually only call us in when they are confident in their suspicions, usually after an anonymous tip.

I've had all 3 as clients, usually it's insurance companies though.

We are typically brought in to either reduce the claim, or deny it outright after they've already been receiving compensation. If we are brought in before compensation is given, it is usually to conduct statements and scene diagrams.

FlamingEagles23: have you ever been "caught" by someone you were investigating? what happened? how much money does one typically make in your line of work?

OP: It isn't unusual to get made on cases. If someone is committing fraud, they typically have heightened suspicion and will be looking out for us, especially if they aren't new at it. The worst one was on my first week of work, inexperienced as I was, I sat too close to the residence, and the person saw me with my camera. Usually people will just give you a horrified look, or flip you off, but this guy decided to get in his truck and chase me down. Luckily for me, my car is quite speedy, and I was able to shake him pretty quickly. We walk a pretty thin line between legal stalking and harassment. If a claimant makes it known that they know of our presence, we have to leave immediately or else it becomes harassment.

Money is tricky, as there are a lot of non-taxable incomes and reimbursements. Typically I can count on around 45k a year after taxes, but I've only been at it for 2 years or so.

Tyster40720: What was the weirdest thing you came across in a case?

OP: Trees. Through some digging online I found one of my claimants purchased 500 apple trees. They lived in a condominium. I never found out what that was about.

NeedWittyUsername16: Maybe they just really liked apples.

OP: I suspect it may have been an illegal transaction, but that's really none of my business.

blake1289s19: So I'm getting ready to graduate high school, and I am seriously looking into becoming a PI but I have no idea how. So I have a lot of questions. What do you major in college? How do you find work after college? Can you leave the states and work in a

different country with your degree? What is the average pay, and is it an exciting job? Lastly, are there more requirements than a college degree?

OP: I majored in Criminal Justice in college, graduating Magna Cum with a Bachelors of Science. I got this position about 2 months after graduating, after seeing it on Indeed.com. I simply applied through the site, and got an interview shortly after. The hiring process is lengthy, as they need to do a lot of background checking to make sure your not a crazy person. It took about a month from my first interview to my first day of training.

I am licensed in every state in the North East, so I can work in all of them freely. If I wanted to work in another state, it would just be a matter of filling out the paperwork and paying the fee. Your experience and college degree should count if you decided to leave the country, but I am not familiar with PI laws outside of the US.

Pay tends to be complicated, as there are a lot of non-revenue reimbursements (untaxable) that amount to profit. A typical year will be around 45k after taxes with reimbursements, and then I can expect a sizable tax return, probably around 5K - 7K for other expenses I incur throughout the year (Feds pay 65 cents on the mile for vehicle depreciation, etc).

It is a very exciting job, but it isn't for every one. I'd suggest finding someone to do a ride along or two with before you take a job. 80% of the job is spent sitting in a parked car, waiting for someone to leave their house. You might spend 10 hours staring at a front door, just to get 10 seconds of video when the person comes outside to get the mail. Or even worse, you might spend that time staring at a house and get no activity at all. That being said, when there is activity, it is very exciting, fast paced, and high adrenaline work. In my opinion, all the waiting is worth it, and I thoroughly enjoy the job. You have to be ok with lying to people every day (neighbors can't know that your investigating someone, and they will ask you why you are in the neighborhood), you need to be ok with writing reports, and breaking driving laws. No company will ever say to you "break the law", but your clients will be upset if you lose someone just because you didn't want to run a red light or speed.

No other requirements but that, PI laws vary state to state, but you can get around them usually by getting licensed through a company. Not even a college degree is required to have the license, but most companies require a Bachelors in something vaguely related. Writing skills are important, so make sure you focus a bit on that when applying.

the_Ex_Lurker24: I'm imagining you as being like Mike Earmantraut. Is that accurate at all?

OP: Not in what I do, but Breaking Bad has had a huge influence over how people see me in the field. There's a certain horrified look that people get when they see a white guy in a new blacked out black honda driving slowly past them multiple times in a poor urban area.

MarblesSixx7: [deleted]

OP: It's not a secret, and probably accounts for 70% if PIs. The other 30 percent are Nissan Altimas

jonar333: a) Have you ever been cited for breaking driving laws? Other laws? Are cops more lenient when they learn you're on the clock as a PI?

b) If so, are you responsible for the fines or other sentences? How does that legal process work?

OP: I've only gotten one speeding ticket since I started, and have a pending tint violation. I have a high end radar detector that mostly prevents tickets. The company officially states that it does not approve of breaking laws. That being said someone would be pissed if I lost someone due to my not speeding or running a red light. Due to that official statement though, I am responsible for any fine I incur. It comes down to risk evaluation.

Dayanx2: Never having seen Breaking Bad, I'm writing a short story about someone in your line of work, have you read any good fiction that puts a realistic edge to modern PI?

OP: Unfortunately, no. Realistic pi work doesn't make for great story telling, unless your writing something Neil Gaiman esque that plays on the realism. A lot of staring at houses for hours on end, pissing in bottles, that sorta thing.

freevo17: How does a regular workday look like? Do you have fixed working hours? Do you have to deal with the Police often? How much access do you have to Police cases? How is it like working with the Police?

OP: Normal schedule: Wake up sometime between 3:30 - 5:00 AM (depending how far away my case is), starting nice and early, usually between 5:30 and 7, depending the case, then I settle into my surveillance position. Most of my days are 8 hours, but sometimes there are specific requests for odd hours, and of course my start times vary greatly depending the person being investigated. I've had days where I start at 5 AM, and days where I don't get out till 2 AM. 80% of my time working is spent staring at someones front door waiting for them to leave.

I have complete control over my schedule. I get cases in, and I organize them myself and decide when to work them. I generally have a lot of discretion when it comes to how files are worked, but sometimes there are specific instructions from clients. Some want specific hours, or specific days to cover different activities.

I deal with the police pretty often. I check in with them every day, as a professional courtesy, so that they don't have to waste time sending an officer out to check on me when they get suspicious vehicle reports. It works both ways, they can deal with calls on me directly over the phone, and they don't blow my cover by sending 3 cruisers to surround my vehicle. Occasionally the police will show up anyway, especially if I'm working near a school or day care (Day cares are fuckin everywhere btw, I had no idea there were so many of them before I started working this job). When they do come out they are usually professional, I just show them my badge and they go along their way.

Most police cases are public information, so everyone has access to them. You can go online and search court cases by name, see their outcomes, etc. I usually don't do this directly, as its typically done automatically by a database program that we use, but occasionally I'll ask specific officer's that I see to check the system for the person I'm following, to make sure they aren't sitting in a jail cell.

wsfarrell15: A book I read a while back said that PIs on stakeouts are like taxi drivers: they know the location of every public toilet in the city. True?

OP: Very true. Police departments are the best, always clean, no need to buy anything. If you're willing to buy something, I prefer subways, dunkin donuts, and burger king. They have private one person bathrooms, which I find more comfortable. If you're a guy and just have to take a piss, a water bottle and a tinted car does just fine.

muffinman92x14: what was the scariest situation you have ever been in, while on the job? Also do you own a yellow trench coat?

OP: I almost got arrested once, that was pretty scary. Early on in my career, I was working a case early in the morning. I stopped briefly in a high school parking lot to take some video of the claimant's residence. After being there for a couple seconds, 4 police cruisers showed up with lights and sirens, boxed me in, had me get out of the car at gun point, the whole 9 yards. Also, although I was licensed, I had sent my PI badge into the office to be photocopied and laminated, so I didn't have it on me. After a few tense minutes with the police, I was able to get through to our legal department who cleared it all up. Police apologized for the "formalities" and I learned to always let the police know I'm working in the area. And no, no yellow trench coat, little black debadged honda with dark tint though.

Edit- This was shortly after the Newtown shootings, not too far from there, so the police were extra sensitive.

PurpleKiller13: How useful is social media for your job? Can you get around someone's privacy settings on Facebook/Twitter?

OP: Social media is extremely helpful and important. It is really amazing how much personal information people put online. I've had cases that would have failed completely had the person not put their new address, pictures of themselves, and even pictures of their vehicles (with license plates) online. Facebook's privacy settings are pretty solid, and there really isn't any legal way around them. If you hide all your pictures, there is no way that I can see them. One thing most people don't realize is how much information other people (who aren't so careful with privacy) post about you. I usually have a list of relatives and neighbors, and a good 50% of the time I can find pictures and info of whoever I'm following through someone else's profile, ie: parents, room mates, children, siblings.

PurpleKiller4: What about using search engines for internet personas? I've managed to discover the complete identities of people online just by running enough google searches using the person's username. Is there a better way to do this?

OP: Nope, that is basically it. I usually google search for name and location, and that brings up pretty specific results. If the person has a very common name google searches don't work.

chrislck1: If you have license plates, how do you go about digging into a vehicle history? Does your PI licence give you additional rights into government or insurance etc databases?

OP: We have the ability, as PIs, to run plates like the police do. It gives us the registrants, and the address of the registrant.

Yaro_S13: Do you browse reddit when you're staking out a house?

OP: Yes. Reddit is pretty good entertainment that doesn't require too much of my attention. I was on a case while doing this ama.

obxfisher12: Do people ever hire private detective detectives? Like could you ever be hired to investigate another detective? I can just see a case where a wife hires a detective to watch her husband. Husband kinda feels like he's being watched, so he hires a detective to try to find you. Or he knows he is being followed and wants you to find out who is following him.

OP: As confusing as it is, it does happen. Lawyers sometimes hire PIs to investigate PIs that are working against their client. They do this to try to find unethical practices that would get the case thrown.

spaghettibeans12: Who is your Daddy and what does he do?

OP: He's a plastics chemical engineer, or was before he retired.

oddbrandon11: This thread makes me realize how easy it is to be a "private investigator" and how little privacy we actually have.

OP: It is very easy. As long as you don't have a criminal background, you can probably get a license. Once you have a license you can buy a database search that provides you with every bit of information on anyone. Vehicles, addresses, phone numbers, relatives, neighbors, social security numbers, birthdays, AKA's, even the square footage number of bedrooms and value of their house. It is all public information.

oddbrandon4: How does one acquire this license?

Eldochart13: just google your state's laws, they'll probably have everything you need on the site. Fill out paperwork, pay the fee, thats all.

princesskittycuts-3: As long as you don't have a criminal background, it is okay to run red lights and speed.

OP: Like I said in another thread, no company would ever require you to break the law, but your clients won't be happy if you lose someone because they were driving faster than the speed limit. It's all a calculation. I won't endanger myself or anyone else in order to follow someone. If I'm at a red light, and there are no cars coming in either direction, I will risk getting a fine in order to not lose my claimant.

DaCrazyKoala11: What do you tell the neighbors of people your investigating when they ask you why you are in their neighborhood?

What do you call the person your investigating? Like perp or whatever.

How much do you pay in tickets/fines a year? Speeding or otherwise.

What is the Database program that you use for research called?

How are your cases assigned?

OP: I usually tell people that I am doing a vehicle repossession. That's sort of the go to thing with PI's. If anyone ever tells you that, they are probably lying to you. If I intend on being outside my vehicle during the investigation, I'll tell people that I'm doing environmental surveying. I spent 2 years studying Conservation Law before I transferred to a CJ program, so I know enough about it to satisfy neighbors.

In the insurance field, they are called claimants, as they are the person making the claim. If they aren't the person making the claim, or if it's a different type of fraud, they are called subjects.

I'm pretty good at not getting caught, and getting out of tickets when I do. I have a high quality radar detector that prevents most traffic violations. I've received 1 speeding ticket this year, which I got out of by being polite to the officer (so that he did not remember me) pleading not guilty, rescheduling the court date 3 times, which caused the judge to assume there was an error in the system that caused the delayed appearance and throughout the case and apologized for the inconvenience. I have a pending window tint violation, which will be reduced to a warning once I get it reduced to 35% tint instead of the 20% it is now.

The database is through Lexis Nexis.

The cases are emailed to me from the office. I work from home / out of my car, and have only been to the office 3 times in my time working here.

DaCrazyKoala8: Do you have a trunk full of props for your cover stories?

For the environmental surveying cover, do you just whip out a Theodolite or say your testing the water or whatever?

OP: The back of my car is pretty full of things. I have a change of clothes, a couple different jackets and sweat shirts, a blanket, a folding camp chair, a bathing suit, suit and tie, and a fishing pole. The best is when I'm pretending that I'm fishing, and an EPO shows up to check my fishing license. I then get to explain to him that I'm not licensed, and not actually fishing, showing him that it's just a floater with no hook.

leadnpotatoes10: At that point why not just get the fishing license?

OP: I wouldn't use it. I shell fish though.

nagilfarswake3: What radar detector do you have? I'm guessing Valentine 1 or an Escort passport 9500 ix.
